SHACTIVATE BENEFITS:

Reduces odours and harmful gases
providing for a safer and more pleasant environment in and around your RV.

Reduces organic solids
creating increased waste storage and reducing clogs when pumping.

Reduces contaminant availability
resulting in a healthier system for microbes and a reduction of toxins in the waste stream.

APPLICATION:

Pour 125—250 ml (4-8 oz.) into empty holding tank or pour and rinse down toilet or drain. Repeat each time tank is emptied.

Each 1L bottle contains up to 8 treatments.

They make beautiful bathrooms in today's RV's.
It's a shame when foul odours take over.
Use SHACTIVATE and enjoy your holiday !!!

HOW IT WORKS:

SHAC products are made of liquefied, oxidized lignite. The lignite is rich with nutrients that feed microbes already present in organic waste. These healthy, well fed microbes bio-digest waste very quickly.

In RV tanks there is very little oxygen in the air, so microbes have to take oxygen from other chemical compounds, such as sulfates. When they take away that oxygen, a new compound is made, such as hydrogen sulfide; also known as sour gas or rotten egg gas. By oxidizing the lignite (adding oxygen) the microbes have easy access to oxygen and don't create the smelly gasses.
